

UST Installer Training Course

PEI will hold a one-day recertification course for UST installers. The course is based on the latest (2011) edition of the PEI RP100, Recommended Practices for the Installation of Underground Storage Tanks.

The course, taught by Carl E. "Buddy" Bayliss, president of B C & C LLC of Winchester, Virginia, is certified by West Virginia, Maryland, Pennsylvania, and Mississippi as an 8-hour continuing education course required for the recertification of licensed UST installation professionals.

Each participant will receive a comprehensive take-home notebook that includes the newly revised RP100, plus four other PEI Recommended Practice documents (AST installation, vapor recovery, UST inspection, and marina refueling equipment). The notebook will also contain installation instructions from various equipment manufacturers, as well as OSHA and NIOSH safety guidance. PEI will award a certificate of completion to all persons successfully completing the eight-hour course.

The one-day course will cost \$200 per individual and requires a minimum of ten attendees.

Installers interested in hosting the one-day course should contact Chris Bouldin at (918) 494-9696 or cbouldin@pei.org for availability and pricing information.
